

# Silver-Kote®

The SK release coating eliminates heavy pre-seasoning prior to first use.

Combining our in-house anodizing processes with our proprietary water-based release coatings, our pans require less time to maintain, last longer, cook better and are easy to clean up. SK is only available from LloydPans.

The LloydPans exclusive release finishes are created by applying several coats of our liquid sealer followed by bake time in an industrial oven. The sealer is actually absorbed into the pores of the anodized finish and only requires an initial wash before use. The result eliminates the need for messy pre-seasoning, and provides a durable and long lasting product.

Every step of the manufacturing and coating process is conducted entirely in-house at our facility in Spokane Valley, Washington.
